Introduction

【Name】 Digital Night Vision Viewer

【Model】 PSHTCM88

【Features】

- It is a night vision viewer which can be used to observe objects in the dark and low light situation. Two lighting modes are available to use. The viewing distance in the low light environment will be at infinity, 700 feet, viewing distance in the dark environment.
- Easy to exchange data with other instruments, having USB, AV OUT and DC IN sockets.

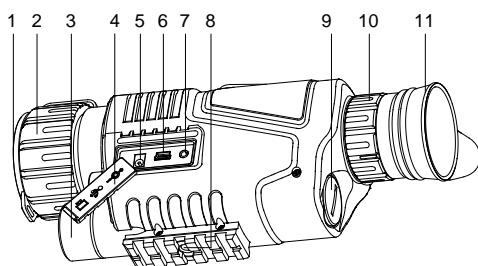

Operating Hints

- It can be used normally in the day or night, with photo shooting, video shooting, playback and other functions. 5X Optical Zoom and 8X digital Zoom.
- It is the best auxiliary tool of extending human's visual senses.

【Operating Hints】

- It is a night vision viewer which can be used to observe objects in the dark and low light situation. Two lighting modes are available to use.
- It is suitable to use in full dark environment.
- Turn the auxiliary light on to observe the objects when it works in the dark situation. Adjusting the brightness by the distance of the objects. CCD is utilized in this viewer. If there is any light resource existing, the auxiliary light cannot be turned on, please adjust the focal distance only to get the sharp image of objects.
- Operating time: 1 hour under auxiliary light mode; 1.5 hours without using auxiliary light mode.

Components Introduction

1 - Objective Cover

2 - Objective Focusing Wheel

3 - High Beam Light

4 - Socket Door

5 - DC 5V

6 - USB2.0

7 - Video/Audio Output Connector

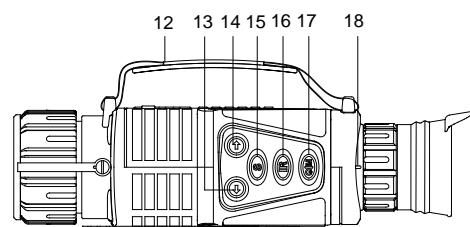

8 - Tripod Receptacle

9 - Battery Cover

10 - Diopter Ring

11 - Eyecup

Components Introduction

12 - Hand Grip Strap

13 - Up

14 - Down

15- Functions(for photos shooting, video shooting and playback)

16 - Auxiliary Lighting/Brightness Adjustment

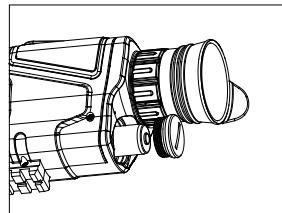

17 - POWER/FUNCTION

18 - Diopter Dial

【Operating Environment and Announcements】

The viewer should be kept in the soft pouch. Operating temperature ranged at 20~104°F. Relative humidity is 80%.

In order to avoid the unit getting wet and mildew, please keep it in the clear and dry environment. Avoid direct impacts, excessive pressure and solar radiation please.

When image vibration or jitter happens or the LCD will not be light up, please charge the battery immediately.

Blow away the dusts before wiping the optical surface.

If the viewer won't be used for a long time, please charge the battery occasionally to avoid long term damage.
